LAB 4

This week we will be building on the portfolio site we have constructed by adding images with effects, audio, and video to our site and controlling the way that users interact with it.

1- Add an audio file that attempts to play automatically in Chrome or Firefox when you visit the "home" page.

2- Add a main graphic that is constant on every page of your site. Upon hovering the mouse over the image, it should change into another image, utilizing the rollover technique from the book. The graphic should also have rounded corners.

3- Add one graphic anywhere on your occupation page that does not use rollover or rounded corner effects.

4- Add a video to your education page that is less than 10mb. The video should automatically play when you visit the sales page. After the video plays, the user should be able to play it again, so you must have controls for the video (demonstrated in the book). You are to embed a video, not link to play one on youtube or other website. Your video should be included in a video folder. You should have a video folder and an audio folder NOT A MEDIA FOLDER.

5- Your site should still be responsive, and your main image on all pages should be responsive as well. Your 2-column Interests page should display column 1 and 2 on the left and right, as in side by side on larger screen resolutions. ON Mobile sizes, it should display as a single column and the right column should beneath the left column.

6- Your site should have an ICON as a shortcut ICON in the head section of every page.

You will get 1-5 Points for each of the 6 categories above!

5 – points - Meets all requirements, and last labs issues are fixed.

4 – points - All elements are there but needs work.

3 – points - Some elements are there but needs work, issues from last lab are not fixed

2 – points – Many elements missing, a few are there, and a few things have been fixed.

1 – point – Only a small amount of work is done, and nothing from the last lab is fixed.
